In the zip file, you can find an mp4 file showing our old MediaMonks flash website on how to be a Monk.

The test is to rebuild this website in HTML, CSS and JavaScript/TypeScript:

- You are NOT allowed to use an external framework or library (i.e. jQuery or Bootstrap)
- Aim to replicate the design and functionality as close as possible to the flash site
- Write clean, scalable and reusable code
- You are allowed to use CSS preprocessors
- JavaScript valid for the last version of Chrome
- Bonus points if you use TypeScript
- Extra points if it also works on mobile
- Make it as awesome as possible
- If you need to use any other external resource (framework, library, code snippet, etc.), please justify why they were used and chosen in the first place. And provide a link to the resource you used

The assets that you need are included as well in the zip file.

Usually, we set a time frame of a week to complete the test and return it to us. This test should be done in approximately 4 to 8 hours. When you are finished, please send us your result in a zipped file via email.

Make sure the test is properly built so that it will run directly in the browser with no additional steps.
